## Abstracts

Polytetrafluoroethylene (PTFE) anti-dripping agents are specialized polymer additives used primarily in the plastics and textile industries to enhance the flame retardancy and safety of materials by preventing molten polymer droplets from forming and dripping during combustion. These agents work by forming a fibrillar network within the polymer matrix upon heating, which increases melt strength and viscosity, thereby reducing dripping behavior that can spread flames or cause secondary ignition. PTFE-based anti-dripping agents are valued for their high thermal stability, chemical resistance, and effectiveness at low loadings, making them suitable for applications in engineering plastics, synthetic fibers, and coatings where stringent fire safety standards must be met without significantly compromising mechanical properties or processability.

The global Ptfe Anti Dripping Agent market size was estimated at USD 320.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
