## Abstracts

PTFE Lined Diaphragm Valves are corrosion-resistant industrial valves designed for handling highly aggressive chemicals, high-purity fluids, or extreme temperature applications. They feature a metal valve body lined with PTFE (Polytetrafluoroethylene), a chemically inert fluoropolymer known for its exceptional resistance to acids, bases, solvents, and corrosive media. The valve operates via a flexible diaphragm (typically PTFE or elastomer-coated) that moves to open or close the flow path, ensuring a leak-tight seal and preventing fluid contact with internal metal components. These valves are widely used in chemical processing, pharmaceuticals, water treatment, and semiconductor industries, where chemical resistance, contamination-free operation, and durability are critical.

The global PTFE Lined Diaphragm Valves market size was estimated at USD 83.8 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
