PTFE lubricating coating is a non-stick, low-friction surface layer formed by applying polytetrafluoroethylene particles, often in a resin matrix. It provides excellent chemical resistance, high-temperature stability (up to 260°C), and superior anti-adhesion properties. Widely used in automotive parts, industrial machinery, food processing equipment, and aerospace components, it reduces wear, prevents material buildup, and ensures smooth operation in demanding environments. Upstream includes raw material suppliers who provide PTFE resins, solvents, and additives. Midstream includes coating formulators and applicators who develop and apply coatings. Downstream customers include original equipment manufacturers (OEMs) in the automotive and aerospace industries, who integrate coated components into end products such as bearings, molds, and cookware.

The global PTFE Lubricating Coating market size was estimated at USD 147.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
