Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PTFE Mesh Membrane competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PTFE mesh membrane is coated with PTFE on a mesh cloth woven from glass fibers. Glass fibers are woven from alkali free glass fibers and then prepared through processes such as reinforcing agents and thermal pressure stabilization. Therefore, PTFE mesh membrane has a higher cost. The fire rating of PTFE mesh film is determined by the surface PTFE coating. Ordinary PTFE coating has a B1 fire rating, while modified PTFE coating can achieve an A2 fire rating. Therefore, PTFE mesh film can be used for outdoor facade decoration, as well as indoor roofs and canopies to weaken direct sunlight. In 2024, global PTFE Mesh Membrane production reached approximately 62.20 K MT, with an average global market price of around US\$ 2638 per MT. The annual production capacity of a single production line is 500 tons, with a gross profit margin between 20% and 50%. Raw material cost: 60% -70%; Manufacturing cost: accounting for approximately 15% -20%; Labor cost: accounting for approximately 8% -12%.

The global PTFE Mesh Membrane market size was estimated at USD 172.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
