Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PTFE Pall Ring competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PTFE Ball Ring, in the PTFE chemical industry tower, requires the use of PTFE packing. Due to the high temperature of its tower components and the high requirements for materials, it requires strong corrosion resistance. We usually use PTFE packing as a mass transfer device, among which PTFE Bauer ring packing is a widely used packing.

Tetrafluoroborate ring packing has the characteristics of acid resistance, alkali resistance, and resistance to various organic solvents. They are almost insoluble in all solvents and have strong corrosion resistance. They can resist high and low temperatures. When using temperature, -190~250 °C can be used, allowing for sudden hot and cold or alternating hot and cold operations. The mass transfer of polytetrafluoroethylene (PTFE) material and PTFE packing have solved many problems in the fields of chemical, petroleum, pharmaceutical, etc. In 2024, global PTFE Pall Ring production reached approximately 44.49 K MT, with an average global market price of around US\$ 3,359 per MT. The annual production capacity of a single plastic ball ring production line is about 1,000 tons, The gross profit margin is around 30%. Upstream raw materials: PTFE resin, colorants, etc. Downstream applications: chemical industry, pharmaceutical industry, water treatment, environmental protection industry, etc. Direct material costs account for about 60%-70%; direct labor costs account for about 10%-20%; manufacturing expenses account for about 20%-30%.

The global PTFE Pall Ring market size was estimated at USD 149.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
