Abstracts

PTFE release agents are particularly effective in potting and casting molding operations, specifically with electronic potting and casting as PTFE's chemical inertness and low-transfer will not interfere with the sensitive electronics. Release agents, also known as mold release agents or demolding agents, play a crucial role in various industries, including manufacturing, food processing, and automotive, by preventing adhesion between surfaces and molds or tools. The food processing industry is a significant consumer of release agents, especially for baking and confectionery applications. The demand for healthier and cleaner-label food products has driven the need for specialized food-grade release agents. The manufacturing industry, including the automotive, aerospace, and foundry sectors, relies on release agents to facilitate the demolding of components. The adoption of advanced materials and technologies has influenced the demand for specialized release agents.

The global PTFE Release Agent market size was estimated at USD 1022.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.10% during the forecast period.
