PTFE is widely used as a valve seat material for various working conditions that require resistance to acid, alkali and corrosion. The PTFE is wound on a rubber ring and fixed in the groove of the separate valve body. After the valve is opened, its rubber core produces a rebound force, so that the PTFE slowly returns to the desired position. for a tight cut off the next time it is closed. This configuration seals against a differential pressure of 720 psi (50 bar) after 100,000 openings.
