Abstracts

PU-based reactive hot melt adhesive is a specialized type of adhesive known for its unique formulation and curing characteristics. Unlike traditional hot melt adhesives that rely on physical cooling for bonding, PU-based reactive hot melt adhesives undergo a chemical curing process after application, leading to the development of a strong and durable bond. These adhesives typically contain reactive components, such as isocyanate or epoxy groups, which facilitate cross-linking and polymerization reactions. The curing process is triggered by specific environmental conditions like heat or moisture, contributing to the adhesive's enhanced performance properties.

The global PU-based Reactive Hot Melt Adhesives market size was estimated at USD 799.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.50% during the forecast period.
