Abstracts

PU coated gloves, also known as polyurethane-coated gloves, are a type of work gloves designed to provide protection and grip in various industrial and manual tasks. These gloves are made by coating a polyurethane material, which is a synthetic polymer, onto the palms and sometimes the fingers of a fabric or knit glove liner. The polyurethane coating forms a thin, flexible, and durable layer on the glove's surface.

Growing Demand for Safety Equipment: The global demand for safety equipment and personal protective gear, including PU coated gloves, had been on the rise. This trend was largely driven by increased awareness of workplace safety, stringent regulations, and the need to protect workers from various hazards.

Ergonomics and Comfort: Users were increasingly looking for gloves that not only provided adequate protection but also offered comfort and dexterity. PU coated gloves had been gaining popularity due to their lightweight and flexible nature, which allows for better hand movement and reduces fatigue during prolonged use.

Technological Advancements: The industry was witnessing advancements in materials and technologies used for coating gloves. This included innovations to enhance grip, abrasion resistance, and durability, which can make PU-coated gloves more appealing to end-users.

The global PU Coated Gloves market size was estimated at USD 2045.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
