## Abstracts

A Public Safety Recording System is a crucial technological infrastructure that plays a pivotal role in safeguarding communities. It encompasses a comprehensive set of tools and components designed to capture, store, and manage audio and video recordings related to public safety incidents. These systems are typically deployed in law enforcement vehicles, police stations, emergency call centers, and other key locations. For instance, in patrol cars, dash cams record traffic stops, pursuits, and other on-road encounters, providing an objective visual and auditory account that can be used for evidence in investigations, officer training, and to ensure transparency in police actions. In emergency call centers, recordings of 911 calls capture the distress calls of citizens, helping dispatchers make accurate decisions and also serving as a vital record for subsequent analysis. The stored recordings must adhere to strict legal and privacy requirements, ensuring that they are accessible only to authorized personnel and used appropriately to maintain public trust and enhance overall public safety.

The global Public Safety Recording System market size was estimated at USD 425.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
