Abstracts

A public restroom guidance system is an intelligent system that utilizes the Internet of Things (IoT), sensors, and display technology to optimize the efficiency and user experience of public restrooms. This system typically uses infrared or magnetic sensors installed at each toilet stall to collect real-time information on stall occupancy (vacant or occupied), then transmits the data to a centralized controller and cloud platform. The collected information is updated in real-time on electronic displays or signs at the restroom entrance, clearly showing the number of available toilet stalls in each area or floor, thus guiding users to quickly find vacant stalls, avoiding queues or aimless searching. It also provides managers with data on passenger flow and usage frequency to optimize cleaning and maintenance scheduling. The public toilet guidance system market is benefiting from the global wave of "smart city" construction and is rapidly transforming from an innovative technology into a rigid demand for refined urban management. In high-traffic areas such as airports, train stations, large shopping malls, and tourist attractions, guidance systems can directly address users' core pain points?queueing and finding available toilet stalls. For city managers, the system provides valuable real-time usage data, enabling cleaning and maintenance work to shift from fixed schedules to dynamic scheduling based on actual needs (on-demand cleaning), significantly improving management efficiency and environmental hygiene. This clear and quantifiable return on investment is the main driving force behind the rapid market adoption. The future market value of public toilet guidance systems will transcend simple "occupancy/vacancy" indications, moving towards deeper integration of environmental health and energy management. With the maturity of IoT technology, high-end systems are integrating functions such as air quality sensors (e.g., ammonia, hydrogen sulfide), energy consumption monitoring, and automatic disinfection control. This means that manufacturers need to provide a robust cloud platform solution, not just hardware. The focus of market competition has shifted from hardware costs to data

analytics capabilities and platform scalability. Successful companies are able to seamlessly integrate public toilet data with city environmental maps, mobile applications, and even public transportation systems to provide a comprehensive urban public health solution.

The global Public Toilet Guidance System market size was estimated at USD 120.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 10.50% during the forecast period.
