Abstracts

The pull-down internal broaching machine is a machine tool specially used for internal hole processing, which adopts the processing method of pulling the tool downward for cutting. Unlike the pull-up internal broaching machine, the tool of the pull-down internal broaching machine starts from the top and passes through the workpiece and pulls downward to complete the processing. This design is suitable for processing longer workpieces, especially in the precision processing of deep holes and multi-level internal holes. Due to its structural characteristics, the pull-down internal broaching machine has high rigidity and stability. It is suitable for scenarios with high requirements for processing quality consistency in mass production. It is widely used in the automotive, aerospace, shipbuilding, engineering machinery and other industries. Typical processing objects include gear inner holes, hydraulic cylinder blocks, cam bearing seats and other parts.

The global Pull Down Internal Broaching Machine market size was estimated at USD 588.7 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
