## Abstracts

The pull-up internal broaching machine is a high-precision machine tool specially used for precision internal hole processing. It mainly processes the inside of the workpiece through a rotating cutting tool. Unlike the traditional pull-down internal broaching machine, the tool and workpiece of the pull-up internal broaching machine are driven from above. This design can provide higher processing stability and precision. The pull-up internal broaching machine is often used to process large-diameter, high-precision workpieces. It is widely used in internal hole processing in the aerospace, automotive, heavy machinery and other industries, such as engine parts, aircraft parts, rolling bearings, etc. Due to its excellent processing capability and high precision, it is particularly suitable for precision internal hole processing of high-strength, large-size parts, and is one of the indispensable equipment in modern precision manufacturing.

The global Pull-Up Internal Broaching Machine market size was estimated at USD 186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
