Abstracts

Pulley lagging is a surface treatment process for pulleys. Rubber materials are firmly bonded to the pulley surface, creating an elastic and wear - resistant rubber layer. This layer enhances friction between the pulley and conveyor belt, preventing belt slippage. It also protects the pulley surface from wear, corrosion, and material adhesion, prolonging the pulley's service life. Widely used in industries like mining, ports, and power for material conveyance.

The global Pulley Lagging market size was estimated at USD 2138.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
