Abstracts

The pulmonary embolism drug market encompasses pharmaceutical products specifically designed for the treatment and prevention of pulmonary embolism, a potentially life-threatening condition caused by blood clots traveling to the lungs. This market includes anticoagulants, such as direct oral anticoagulants (DOACs) like apixaban, rivaroxaban, and dabigatran, which inhibit clot formation; thrombolytics, such as alteplase, used in acute, high-risk cases to rapidly dissolve clots; and adjunctive therapies like inferior vena cava filters for patients with contraindications to anticoagulation. The focus is on drugs that offer improved safety profiles, reduced monitoring requirements, faster onset of action, and greater convenience compared to traditional therapies like warfarin, addressing both acute management and long-term secondary prevention to reduce recurrence risk and mortality.
