## Abstracts

Pulsating vacuum sterilizers are advanced medical devices designed to eliminate all forms of microbial life, including spores and highly resistant pathogens, through a process that alternates between creating a vacuum and introducing pressurized steam; this pulsing action ensures more effective air removal, steam penetration, and temperature uniformity within the sterilization chamber, making these systems particularly suitable for porous, hollow, or complex-lumen instruments where traditional gravity-displacement sterilizers might fail.

The global Pulsating Vacuum Sterilizer market size was estimated at USD 245.8 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
