Abstracts

Pulse compression radar refers to a radar system that transmits long-duration, frequency- or phase-modulated pulses and uses signal processing techniques to compress the received echo into a much shorter pulse, thereby achieving high range resolution without sacrificing average transmitted power or requiring extremely high peak power. This technology enables superior target discrimination, improved signal-to-noise ratio, and enhanced resistance to jamming and interference compared to conventional pulse radars.

The global Pulse Compression Radar market size was estimated at USD 3850.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.30% during the forecast period.
