Report Overview:

Pulse oximetry is a non-invasive method for monitoring a person's O₂ saturation. In its most common (transmissive) application mode, a sensor device is placed on a thin part of the patient's body, usually a fingertip or earlobe, or in the case of an infant, across a foot. The device passes two wavelengths of light through the body part to a photodetector. It measures the changing absorbance at each of the wavelengths, allowing it to determine the absorbances due to the pulsing arterial blood alone, excluding venous blood, skin, bone, muscle, fat, and (in most cases) nail polish.

The Global Pulse Oximetry Market Size was estimated at USD 2311.07 million in 2023 and is projected to reach USD 3566.67 million by 2029, exhibiting a CAGR of 7.50% during the forecast period.
