Abstracts

A pulse oximetry monitoring device is a non-invasive medical instrument used to measure the oxygen saturation level (SpO₂) of arterial blood and pulse rate, typically by clipping onto a fingertip, toe, or earlobe, where it utilizes light absorption principles?emitting specific wavelengths of light through the skin and detecting the amount of light absorbed by oxygenated versus deoxygenated hemoglobin to provide real-time data on a patient's cardiopulmonary status. These devices range from basic consumer-grade fingertip models for general wellness tracking to advanced hospital-grade continuous monitoring systems integrated into multi-parameter patient monitors, with features such as alarms, data logging, and connectivity for clinical use in settings including emergency care, surgery, and chronic disease management. The technology is critical for detecting hypoxemia early, managing respiratory conditions like COPD or COVID-19, and monitoring during anesthesia or sleep studies, offering a quick, reliable, and painless method to assess oxygen delivery in both clinical and home environments.

The global Pulse Oximetry Monitoring market size was estimated at USD 2784.2 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.15% during the forecast period.
