## Abstracts

The DC pulse power supply is mainly used for electroplating gold, silver, nickel, tin and alloys and can significantly improve the functionality of the coating, protective decoration when used for plating (decorative gold etc.), uniform colour and good brightness of the coating and high corrosion resistance. The principle of the DC pulse power supply is to supply sufficient energy to the primary energy by means of a slow energy storage. It then charges (or flows) the intermediate energy storage and pulse shaping system, undergoing complex processes such as storing, compressing, pulsing or converting the energy and finally releasing it rapidly to the load.
