## Abstracts

A Pulsed Eddy Current Testing (PECT) service is a non-destructive inspection offering in which trained technicians use pulsed eddy current technology to detect corrosion, wall-thickness loss, or other defects in metal structures?such as pipelines, storage tanks, ship hulls, and offshore platforms?without the need to remove coatings, insulation, or marine growth. The service deploys a probe that emits a short electromagnetic pulse into the material; changes in the returning signal reveal variations in conductivity and thickness, enabling assessment of hidden damage. PECT services are valued for their ability to inspect large areas quickly, minimize downtime, and reduce surface preparation costs compared to traditional methods.

The global Pulsed Eddy Current Testing Service market size was estimated at USD 78.35 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
