Abstracts

Pultruded Plates for Wind Turbine Blades refer to a type of composite material plate specifically designed and manufactured for use in wind turbine blades. The pultrusion process is a manufacturing method for producing composite materials with constant cross-sectional shapes. In this process, reinforcing fibers, such as glass fibers or carbon fibers, are first pulled through a resin bath. The resin, typically an epoxy resin, impregnates the fibers thoroughly. The continuous pulling action results in the production of long, straight profiles with consistent cross-sections.

The global Pultruded Plates for Wind Turbine Blades market size was estimated at USD 4894.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.40% during the forecast period.
