Abstracts

A Pump Butterfly Laser Diode is a specific type of semiconductor laser diode designed for pumping applications, often used in laser systems and optical amplifiers. Industrial applications have seen a surge in demand for high-power laser diodes, which are multimode laser diodes that have an amplified emitter that can deliver higher power than single-mode laser diodes. The output power varies according to the desired wavelength. Laser diodes range in wavelength from ultraviolet (~370 nm) to mid-infrared (>2 um) wavelengths. High-power laser diodes can achieve output powers of several watts at some wavelengths and hundreds of milliwatts at others. With the advent of kilowatt-class high-power diode laser systems, industrial high-brightness systems are used for welding applications, while low-brightness laser diodes are used for high-power applications such as cladding, additive manufacturing, brazing and hardening. The high initial investment required for laser diodes compared to other light emitting diodes is a major constraint for the overall laser diode industry. Different processes, systems and applications require laser powers ranging from a few hundred watts to several kilowatts. Although the use of laser products in industries such as automobiles and manufacturing will reduce labor costs, the cost of installing laser products is very high. The cost of installing laser products is typically 30-40% higher than traditional methods. In order to apply the latest laser products in industries such as automotive, a complete revamp of the assembly line is required, which in turn requires a large capital investment. As the market matures, increasing technological innovations in the field of laser technology for various applications such as medical, telecommunications, military & defense, and automotive are driving the demand for diode pumped lasers.

The global Pump Butterfly Laser Diode market size was estimated at USD 581.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.20%

during the forecast period.
