Abstracts

PUR and PIR cryogenic insulation is widely used in storing gases at extremely low temperatures. Rigid polyurethane (PUR) and polyisocyanurate (PIR) insulation products are highly effective, lightweight, and many can bond to most materials. They have extremely low thermal conductivity and high strength to weight ratio. In combination with excellent manufacturing versatility, it provides a wide range of products. As a result, PIR/PUR insulation products are the natural choice for most construction insulation applications. The PUR (Polyurethane) and PIR (Polyisocyanurate) Cryogenic Insulation market represents a critical segment within the field of cryogenic insulation materials, specifically designed to withstand extremely low temperatures. These advanced insulating materials find applications in the storage and transportation of liquefied natural gas (LNG), cryogenic gases, and other low-temperature substances. The market is primarily driven by the growing demand for cryogenic storage and transportation solutions, especially in the energy and industrial sectors, where LNG and other cryogenic products play a pivotal role. PUR and PIR insulation materials offer exceptional thermal performance, low thermal conductivity, and resistance to moisture, making them ideal for the preservation and containment of extremely cold substances. Leading manufacturers in this space, including BASF, Huntsman Corporation, and Dow Chemical Company, are at the forefront of innovation, developing advanced PUR and PIR cryogenic insulation solutions to meet the stringent requirements of the cryogenic industry. As the global demand for clean energy and cryogenic applications continues to rise, the PUR and PIR Cryogenic Insulation market plays a crucial role in ensuring the safe and efficient handling of low-temperature substances, contributing to the sustainability and reliability of the energy and industrial sectors.

The global PUR and PIR Cryogenic Insulation market size was estimated at USD 1122.0 million in 2025 and is projected to grow at a compound annual growth rate

(CAGR) of 7.10% during the forecast period.
