Abstracts

The market for pure play and IDM foundries encompasses the semiconductor manufacturing landscape, differentiated by business models and operational focus. Pure play foundries, such as TSMC and GlobalFoundries, specialize exclusively in contract manufacturing for third-party clients that design but do not fabricate their own chips, offering advanced process technologies and scalable production without competing with their customers. In contrast, Integrated Device Manufacturers (IDMs) like Intel and Samsung both design and manufacture their own semiconductor products, though some also offer foundry services to external companies, creating a hybrid model where they may compete with their own clients in certain market segments. This market is characterized by high capital intensity, technological innovation races?particularly in nodes below 10nm?and geopolitical factors influencing supply chain security, with demand driven by growth in areas such as artificial intelligence, 5G, automotive electronics, and IoT devices.

The global Pure Play And Idm Foundries market size was estimated at USD 126.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
