Abstracts

Pure water vending machines are automated, self-service units that dispense filtered and purified drinking water to consumers, typically on a pay-per-use or subscription basis, and are commonly installed in public or high-traffic areas such as shopping centers, residential complexes, transportation hubs, and commercial districts to provide affordable, on-demand access to clean drinking water. These machines employ multi-stage filtration systems?including sediment filters, activated carbon filters, reverse osmosis membranes, and sometimes UV sterilization?to remove impurities, contaminants, and odors from municipal or groundwater sources, ensuring the water meets or exceeds local drinking water standards, and they often feature user-friendly interfaces, payment systems (coins, tokens, cards, or mobile payments), and real-time monitoring for maintenance and quality control.
