Abstracts

Push pull slip sheets are thin, flat pallet alternatives typically made from plastic, corrugated fiberboard, or composite materials, designed to unitize and transport goods without the need for traditional wooden or plastic pallets. These sheets feature a specialized lip or edge that allows them to be used with compatible forklift attachments?push pull clamps?which grip the lip to push the load onto or pull it off of storage racks, trucks, or shipping containers. As a logistics solution, they reduce tare weight, maximize cargo space, lower shipping costs, and minimize product damage, making them especially valuable in industries like food and beverage, retail distribution, manufacturing, and export-import operations where efficient space utilization and hygiene are priorities.

The global Push Pull Slip Sheets market size was estimated at USD 155.88 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
