Abstracts

Pushback Tractor is a specially designed ground support equipment used to push an aircraft back from a parking position to a taxiway or runway. Unlike traditional tractors, pushback tractors usually have higher towing capacity and flexibility, and can effectively control the direction of the aircraft's movement while reducing safety risks to crew members and ground staff. Pushback Tractors can be divided into traditional and towbar-less (TBL) types. Traditional pushback tractors use a towbar to connect the aircraft and push it back by towing. They are highly applicable, but may take up more space. The towbar-less pushback tractor is directly fixed to the front wheels of the aircraft, providing higher flexibility and maneuverability, reducing potential safety risks and wear and tear on the aircraft. Both have their advantages, and the choice depends on airport needs and equipment conditions.

The global Pushback Tractor market size was estimated at USD 265.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
