The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PV Busbar Welding Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. PV Busbar Welding Machine is mainly used in the production of photovoltaic panels to weld busbars to solar cells. The busbar welding machine is a device in the assembly section. The previous process is the string welding machine. The multiple battery strings that have been stringed are arranged and transported to the busbar welding machine. After the whole row is corrected and aligned by the visual sensor, the battery strings are connected with welding ribbons to realize the current convergence of multiple battery strings, forming a complete battery assembly, and then provided to the next equipment for packaging.

The global PV Busbar Welding Machine market size was estimated at USD 121.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.70% during the forecast period.
