Abstracts

Pv duct type air conditioners are specialized split-system HVAC units designed for integration with photovoltaic (PV) solar panels, enabling them to operate primarily or entirely on solar-generated electricity. These systems typically consist of an indoor ducted unit that distributes conditioned air through a network of ducts to multiple rooms or zones, paired with an outdoor condenser unit optimized for variable-speed operation to maximize energy efficiency and compatibility with fluctuating solar power inputs. By leveraging solar energy, these units significantly reduce grid electricity consumption and operational costs, making them particularly suitable for residential, commercial, and industrial applications where sustainability, energy independence, and long-term savings are priorities. The integration often includes smart controls and energy management systems to balance solar availability, battery storage (if applicable), and cooling demand, ensuring optimal performance even during periods of low sunlight.

The global Pv Duct Type Air Conditioner market size was estimated at USD 1200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
