## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PV Grid-Connected Circuit Breaker competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Global PV Grid-Connected Circuit Breaker production reached 5.38 million units in 2024, with an average selling price of US\$114 per unit. PV grid-connected circuit breakers are power protection switchgear used in photovoltaic power generation systems, connecting photovoltaic arrays, inverters, and the grid. They provide isolation, overload, short-circuit, and DC high-voltage disconnection protection, ensuring safe and reliable grid connection and operation of the photovoltaic system. In the event of a system fault, they quickly disconnect the circuit and protect critical equipment. They are used in multiple links of photovoltaic power generation systems, including combiner boxes, DC switchgear, frequency converters, and box-type substations. From a supply chain perspective, the upstream sector includes raw materials and core components such as metal materials (such as copper and silver contacts), plastics, electromagnetic coils, and electronic components (chips and sensors). The downstream sector includes PV module manufacturers, inverter manufacturers, EPC contractors, distribution cabinet integrators, power plant operation and maintenance companies, and end users. The average gross profit margin is between 20% and 35%, with high-end models reaching 35% to 45%.

The global PV Grid-Connected Circuit Breaker market size was estimated at USD 613.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.90% during the forecast period.
