### Report Overview:

The polarizer is mainly composed of composite materials such as PVA film, TAC film, protective film, release film, and pressure sensitive adhesive. TAC (cellulose triacetate) film and PVA (polyvinyl alcohol) film are the main raw materials in the polarizing film, with costs accounting for 50% and 12% respectively. From the overall market development perspective, Japanese companies are in a global leading position in the production of polarizers, especially in the key raw materials required for producing polarizers, such as TAC film and PVA film. They also hold a monopoly position in technology and market. Although companies in other regions have certain technological strength in polarizers, their technological level in key raw materials for polarizers still lags behind that of Japan.

The Global PVA Film for Polarizer Market Size was estimated at USD 2051.26 million in 2023 and is projected to reach USD 2860.69 million by 2029, exhibiting a CAGR of 5.70% during the forecast period.
