Report Overview:

The most versatile thermoplastic material commercially available in a variety of compounded forms to cover a wide range of hardness and flexibility applications is PVC. It has good physical strength and excellent resistance to water and chemicals. The PVC characteristics are when the flame is withdrawn and difficult to ignite and have self-extinguishing.

PVC resin is liable to degradation on heating and is a very tricky material to process, unless properly compounded. This places a great deal of responsibility on the compounding technologist. The use of compounding is to mix the resin and other additives into a homogeneous state of processing. These compounds use for the manufacture of finished products. It is impossible to process PVC resin without the addition of certain compounding ingredients such as heat stabilizers and lubricants.
