Abstracts

A PVC core cutting apron is a specialized personal protective garment primarily used in industrial settings, particularly within the food processing, butchery, and meatpacking industries, designed to shield workers from fluids, contaminants, and physical hazards encountered during core cutting—a process that involves removing the central, often tougher or less desirable, sections of food products like meat, poultry, or produce. Constructed from polyvinyl chloride (PVC) or PVC-coated materials, these aprons are waterproof, chemical-resistant, durable, and easy to clean, providing a barrier against moisture, blood, grease, and minor abrasions while ensuring compliance with hygiene and safety standards in environments where cross-contamination and worker protection are critical concerns.

The global Pvc Core Cutting Apron market size was estimated at USD 25.4 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
