Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PVC Laminated Foam Board competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of PVC laminated foam boards reached 1.18 million tons, with an average selling price of US\$1,650 per ton. PVC laminated foam boards are lightweight, high-strength, and corrosion-resistant boards made primarily of polyvinyl chloride (PVC) resin through foaming extrusion, lamination, or co-extrusion composite processes. They are widely used in advertising displays, architectural decoration, furniture cabinets, transportation interiors, and industrial partitions. Upstream raw materials include PVC resin, foaming regulators, AC foaming agents, stabilizers, calcium powder, and coating materials. The material consumption composition is approximately: PVC resin 62% (730,000 tons), inorganic fillers 25% (295,000 tons), and foaming agents and additives 13% (153,000 tons). Global total production capacity is approximately 1.6 million tons per year, with an average gross profit margin between 18% and 24%. Downstream consumption is as follows: advertising and display materials account for 40%, architectural decoration for 30%, furniture and cabinet manufacturing for 20%, and other industrial applications for 10%. In terms of demand and business opportunities, PVC laminated foam boards are continuously replacing wood, aluminum composite panels, and some composite materials due to their lightweight, easy processing, good weather resistance, and significant cost advantages. Environmental regulations are driving upgrades to lead-free stabilizers and low-VOC formulations, further expanding demand as building decoration trends towards lightweight materials. Future growth points are concentrated in high-surface-quality co-extruded laminated boards, outdoor weather-resistant reinforced boards, engineering-grade foam boards resulting from improved flame-retardant

standards, and customized high-strength products for RVs, energy-efficient buildings, and advertising system integration, which possess higher added value and greater potential for regional expansion.

The global PVC Laminated Foam Board market size was estimated at USD 1947.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.
