Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PVC Packing Straps competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global PVC Packing Straps production reached approximately 1,018,892 tons, with an average global market price of around USD 2,500 per ton. A factory gross profit of USD 25 per ton with 10% gross margin. A single line full machine capacity production is around 1,000 tons per line per year. Downstream demand is concentrated in logistics and warehousing followed by corrugated & paper packaging, food & beverage, construction/industrial users and other applications. PVC (Polyvinyl Chloride) packing straps are strong, flexible, and durable plastic bands used for securing, bundling, and unitizing goods in packaging and transport. They are a type of plastic strapping, an economical and safe alternative to steel for holding items together and preventing shifting during shipment or storage. Unlike other plastic straps, PVC's ability to be welded to itself using heat sealing provides a unique joining method for high-capacity automated production lines.

The global PVC Packing Straps market size was estimated at USD 2547.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.40% during the forecast period.
