Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PVC Stabilizer Additives competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Commonly used stearate heat stabilizers for PVC include calcium stearate and zinc stearate. Stearate heat stabilizers cannot be used alone and must be combined with stabilizer additives such as β -diketone compounds, such as stearylbenzoylmethane (SBM) and dibenzoylmethane (DBM). SBM and DBM, as highly effective β -diketone stabilizer additives, are core components of environmentally friendly calcium-zinc systems and are particularly suitable for PVC products requiring high transparency, food contact, and weatherability. In 2024, global production reached approximately 27,200 Tons, with an average global market price of around US\$ 4,587 per ton.

The global PVC Stabilizer Additives market size was estimated at USD 125.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.70% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global PVC Stabilizer Additives market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
