Report Overview

PVG proportional multi-way valve is a commonly used hydraulic control component, the full name is Proportional Valve Group, that is, proportional valve group. It is usually used in hydraulic systems to control actuators (such as hydraulic cylinders, hydraulic motors, etc.) by controlling the flow and pressure of hydraulic oil. PVG proportional multi-way valve is composed of valve body, valve core, electromagnet, position sensor and other components. By changing the current signal of the electromagnet, the position of the valve core can be controlled, thereby changing the flow and pressure of the hydraulic oil, and controlling the actuator. PVG proportional multi-way valve has the characteristics of fast response, high precision and good stability, and is widely used in various hydraulic systems, such as machine tools, metallurgical equipment, ships, aerospace and other fields.
