The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on PXIe Plug-in Source Meter competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of PXIe plug-in source/meter instruments reached 38,000 units, with an average selling price of \$26,000. PXIe plug-in source/meter instruments are modular test equipment that integrates high-precision voltage/current sourcing and measurement functions. They are widely used in semiconductor device characterization, power electronics, MEMS, sensors, and new energy material research and development. Their upstream raw materials primarily include high-performance semiconductor chips, precision resistors, current amplifiers, PCBs, and module housings. Key suppliers include Texas Instruments (TI), Analog Devices (ADI), and Murata Manufacturing. Downstream applications include foundries such as TSMC, Samsung, Intel, and STMicroelectronics, as well as test system integrators such as Keysight, NI, and Chroma. Demand for this product is expected to surge in the future, driven by the scaling of semiconductor processes, the development of power semiconductors, and third-generation semiconductors (silicon carbide and gallium nitride). Furthermore, the market is expected to exceed \$2 billion, driven by the expansion of testing for new energy vehicles and high-speed communication chips. Intelligent and automated test platforms will become the mainstream development direction.

The global PXIe Plug-in Source Meter market size was estimated at USD 989.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
