Abstracts

Pyrethrins and pyrethroids constitute a class of synthetic and natural insecticides derived from chrysanthemum flowers, primarily used in agricultural, public health, and residential applications due to their neurotoxic effects on insects, rapid degradation in the environment, and relatively low mammalian toxicity. The market is characterized by high demand driven by global food security needs, vector control programs for disease prevention, and increasing adoption in household pest management products. Key market dynamics include regulatory pressures regarding environmental and health impacts, the development of resistance in target pests, competition from alternative biopesticides and newer chemical classes, and innovation in formulation technologies aimed at enhancing efficacy and safety profiles. Geographically, Asia-Pacific dominates consumption owing to intensive agricultural practices and high public health initiatives, while North America and Europe focus on stricter regulatory compliance and sustainable usage patterns. Growth is further influenced by climate change affecting pest prevalence, integrated pest management trends, and expansion in organic farming utilizing natural pyrethrins.

The global Pyrethrins And Pyrethroids market size was estimated at USD 3800.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
