Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Pyrocatechol competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Pyrocatechol, also known as 1,2-dihydroxybenzene, is an organic compound that belongs to the dihydroxybenzene isomer family. It is a colorless crystalline solid that gradually turns brown when exposed to air due to oxidation. Pyrocatechol is produced mainly through hydroxylation of phenol or extraction from natural sources such as catechin derivatives. It is an important chemical intermediate widely used in the synthesis of agrochemicals (herbicides, pesticides, and fungicides), rubber chemicals, polymerization inhibitors, pharmaceuticals, and antioxidants. Additionally, Pyrocatechol serves as a precursor for the production of fine chemicals such as perfumes, dyes, and flavoring agents. Its versatility, high reactivity, and strong reducing properties make it a valuable raw material across multiple industries. Global production of Pyrocatechol exceeded 68,000 tons in 2024, with an average factory price of approximately \$2,000 per ton. The Asia-Pacific region holds the largest share of the Pyrocatechol market, driven by rapid industrialization in China, India, Japan, and South Korea. China is the leading producer and consumer, supported by a strong base of agrochemical and rubber industries. The expansion of pesticide and dye manufacturing in the region continues to create significant demand. Additionally, growing pharmaceutical and specialty chemical production in India further boosts consumption. However, regulatory restrictions on chemical waste management are pushing manufacturers toward greener and more sustainable Pyrocatechol production processes. Europe represents a mature market, with strong demand in specialty chemicals, pharmaceuticals, and polymer industries. Germany, France, and the UK are the major consumers due to their advanced chemical manufacturing sectors. European regulations emphasize sustainable production and

reduced environmental footprint, which has encouraged companies to invest in bio-based and cleaner Pyrocatechol alternatives. Moreover, demand is growing in the field of high-performance materials, adhesives, and coatings where Pyrocatechol is used as a raw material. The North American Pyrocatechol market is stable, with the United States being the key driver. The demand comes primarily from the pharmaceuticals, agrochemicals, and rubber processing sectors. The U.S. benefits from advanced R&D activities and technological innovation, which support applications of Pyrocatechol in biochemistry and polymer research. Stricter environmental regulations, however, limit overcapacity expansion and encourage manufacturers to optimize production efficiency and focus on high-value applications. In Latin America, Brazil and Mexico are the major markets for Pyrocatechol, driven mainly by agricultural activities and the need for pesticides and herbicides. Growing industrialization and expansion of the coatings and adhesives sector also add to market growth. However, limited domestic production capacities mean that the region relies heavily on imports from Asia-Pacific and North America, making pricing more volatile.

The global Pyrocatechol market size was estimated at USD 137.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Pyrocatechol market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
