Abstracts

Pyroelectric detection refers to the use of pyroelectric materials?crystalline substances that generate a temporary electrical voltage in response to changes in temperature?to sense infrared radiation, motion, or heat fluctuations; such detectors are passive, meaning they do not emit energy but instead detect thermal changes in their environment, making them highly suitable for applications including motion sensors, flame detection, spectroscopy, non-contact temperature measurement, and security systems due to their sensitivity, reliability, low power consumption, and ability to operate effectively at room temperature without requiring cooling systems.

The global Pyroelectric Detection market size was estimated at USD 550.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
