Abstracts

Pyrolytic graphite tube is a graphite tube with specific structure and properties made by pyrolysis process. It is made by thermal decomposition reaction of gaseous hydrocarbons (such as methane, etc.) under high temperature conditions, usually in an inert gas protection atmosphere. The decomposed carbon atoms are deposited and crystallized on the high temperature substrate surface (usually graphite substrate), gradually forming a pyrolytic graphite layer with highly oriented and dense structure, which is wrapped around the inner wall of the graphite tube or forms a graphite tube as a whole.

The global Pyrolytic Graphite Tubes market size was estimated at USD 58.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.10% during the forecast period.
