## Abstracts

Pyrroloquinoline quinone acid is a compound with redox properties and belongs to the quinone derivatives. PQQ was first discovered in bacteria and is a coenzyme of some bacteria, participating in the redox reaction of cells. In recent years, PQQ has been widely studied and found to have biological activities such as antioxidant, mitochondrial generation and neuroprotection in mammals. Therefore, it is regarded as a micronutrient with potential health and therapeutic value. Pyrroloquinoline quinone acid is gaining more and more attention due to its potential role in anti-oxidation, promoting mitochondrial biogenesis, and neuroprotection. Some studies have shown that pyrroloquinoline quinone acid can not only reduce oxidative stress, but may also support cognitive function and improve overall energy metabolism. Although these findings provide a scientific basis for the health and therapeutic applications of pyrroloquinoline quinone acid, its long-term safety and efficacy still require more clinical research verification. In the health care product market, pyrroloquinoline quinone acid is gradually becoming a highly respected ingredient, but its actual effectiveness still needs further research and verification.

The global Pyrroloquinoline Quinone Acid market size was estimated at USD 256.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.30% during the forecast period.
