Report Overview

The Q-ToF is a hybrid quadrupole time of flight mass spectrometer with MS/MS capability. The quadrupole is operated as an ion guide in MS mode and as mass selection device in MS/MS mode. A reflectron time-of-flight (TOF) analyzer is placed orthogonally to the quadrupole and serves as a mass resolving device for both MS and MS/MS modes. A collision cell is located between the quadrupole and the TOF analyzer to induce fragmentation in MS/MS experiments. The final detector is a microchannel plate with high sensitivity.

Geographically, North America is estimated to account for the largest share of the global Q-TOF mass spectrometry market, followed by Europe. The growing government funding and increasing biotech and biopharma R&D in the US are the major factors driving the growth of the North American market. The increasing funding for R&D in Canada is expected to propel the market growth during the forecast period. However, the high costs of Q-TOF mass spectrometry instruments is restraining the growth of this market at present.
