Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on qPlus-type Scanning Probe Microscope (SPM) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The qPlus-type Scanning Probe Microscope (SPM) is a highly specialized variant of atomic force microscopy (AFM), designed to achieve subatomic resolution in surface analysis by using a quartz tuning fork sensor. Originally developed for ultra-high-vacuum, low-temperature environments, qPlus sensors allow simultaneous force and tunneling current measurements, enabling both atomic force microscopy (AFM) and scanning tunneling microscopy (STM) capabilities within a single system. This technology is particularly critical in research fields such as nanophysics, surface chemistry, molecular electronics, and quantum material studies. Compared to conventional AFM, qPlus systems offer ultra-high sensitivity, stiffness, and stability, making them essential tools in academic research, national laboratories, and select high-end semiconductor and quantum computing R&D applications. Europe leads both in qPlus technology development and adoption. Research institutions in Germany, Switzerland, Austria, and the Netherlands are among the earliest adopters. Key vendors such as Specs-ZN, Scienta Omicron, and academic-origin brands dominate this segment. The region benefits from strong public research funding and quantum science initiatives. Japan, China, and South Korea show increasing interest in qPlus systems, especially for quantum material research and atomic-level device development. Leading universities and state-funded laboratories in China have accelerated procurement of such high-resolution instruments, often from European vendors or localized integrators. The U.S. market is concentrated in national labs (e.g., Argonne, NIST), Ivy League research universities, and corporate R&D divisions in semiconductors and quantum hardware. Procurement is highly selective, but investment per unit is high due

to long-term research value.

The global qPlus-type Scanning Probe Microscope (SPM) market size was estimated at USD 68.2 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.40% during the forecast period.
