Abstracts

QR Code Navigation AGV (Automated Guided Vehicle) refers to autonomous mobile robots that utilize QR codes as navigational markers, with these codes strategically placed along predefined pathways to guide the vehicle's movement, enabling precise localization, route planning, and task execution in industrial or warehouse environments without requiring complex infrastructure like magnetic tapes or laser guidance systems. This technology relies on onboard cameras to scan QR codes, which encode positional data or instructions, allowing the AGV to adjust its path dynamically, avoid obstacles through integrated sensors, and perform functions such as material transportation, sorting, or inventory handling with high accuracy and flexibility, making it particularly suitable for adaptable logistics setups where frequent layout changes occur.
