The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Quad-Frequency Programmable Clock Oscillator competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The quad-frequency programmable clock oscillator is a high-precision clock source device that supports dynamic switching between four preset frequencies (typical range 1MHz~725MHz) through software configuration (such as I²C/SPI interface), and the frequency stability can reach ±20ppm. It uses quartz or MEMS technology, has low jitter (
