## Abstracts

Quantitative immunoassay refers to a laboratory technique used to measure the precise concentration of specific substances, such as hormones, proteins, antibodies, or drugs, in biological samples by leveraging the specific binding between antigens and antibodies; these assays are characterized by their ability to provide numerical results?often in units like ng/mL or IU/mL?rather than qualitative (positive/negative) outcomes, employing detection methods such as enzyme-linked immunosorbent assay (ELISA), chemiluminescence, fluorescence, or radioimmunoassay to generate quantifiable signals proportional to the analyte concentration. The global quantitative immunoassay market is expanding rapidly, driven by increasing demand for accurate diagnostic testing in clinical settings, rising prevalence of chronic and infectious diseases, and advancements in automation and multiplex assay technologies; key application areas include oncology, endocrinology, cardiology, infectious diseases, and therapeutic drug monitoring, with major market players focusing on developing high-sensitivity assays, point-of-care platforms, and integrated data analysis solutions to enhance throughput and reliability. Growth is further supported by regulatory approvals for novel biomarkers, growing investments in biomedical research, and the expanding use of immunoassays in personalized medicine, though the market faces challenges such as high instrument costs, technical complexity, and competition from alternative molecular diagnostic methods; geographically, North America and Europe currently lead in market share due to well-established healthcare infrastructure and high R&D expenditure, while Asia-Pacific is emerging as a high-growth region fueled by increasing healthcare access, rising disposable incomes, and growing awareness of early disease detection.

The global Quantitative Immunoassay market size was estimated at USD 11060.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of

8.50% during the forecast period.
