Abstracts

A standard Polymerase Chain Reaction (PCR) is an in vitro method that allows a single, short region of a DNA molecule (single gene perhaps) to be copied multiple times by Taq Polymerase. Real-Time PCR, also referred to as Quantitative PCR (or qPCR), was developed as a precise, efficient and rapid method for nucleic acid detection. A significant driver in the PCR machine market is the increasing demand for molecular diagnostics, especially in the context of infectious diseases, genetics, and cancer research. PCR machines offer rapid and accurate DNA amplification and detection capabilities, making them indispensable in various clinical and research applications. However, a notable challenge in this market is the need for continuous innovation and cost-effective solutions. To remain competitive and meet the diverse needs of healthcare and research institutions, manufacturers must invest in developing advanced PCR machines while ensuring affordability and accessibility.
